

To change the NUM.txt file you will need the following.

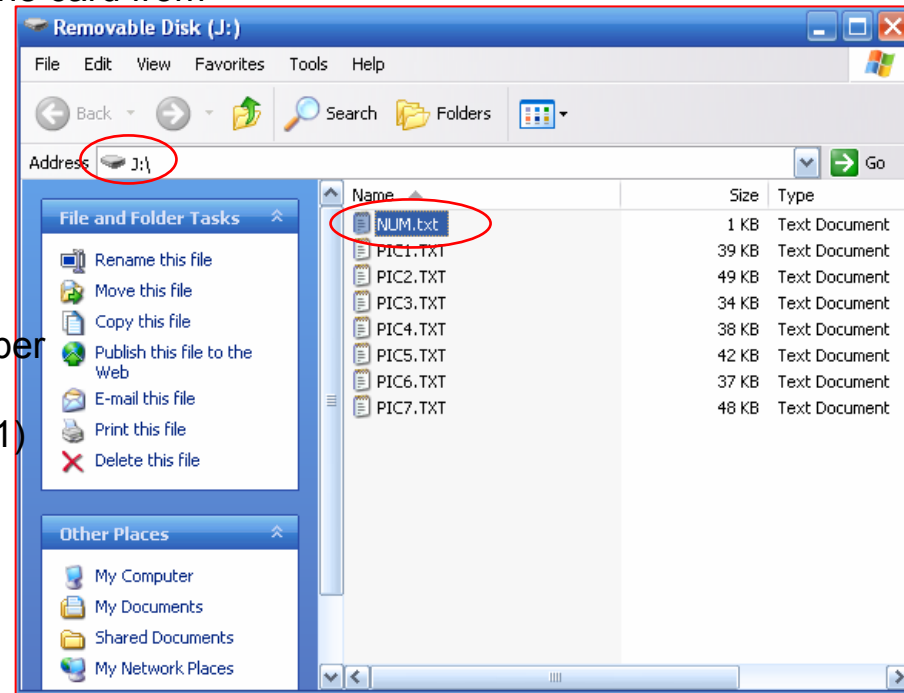

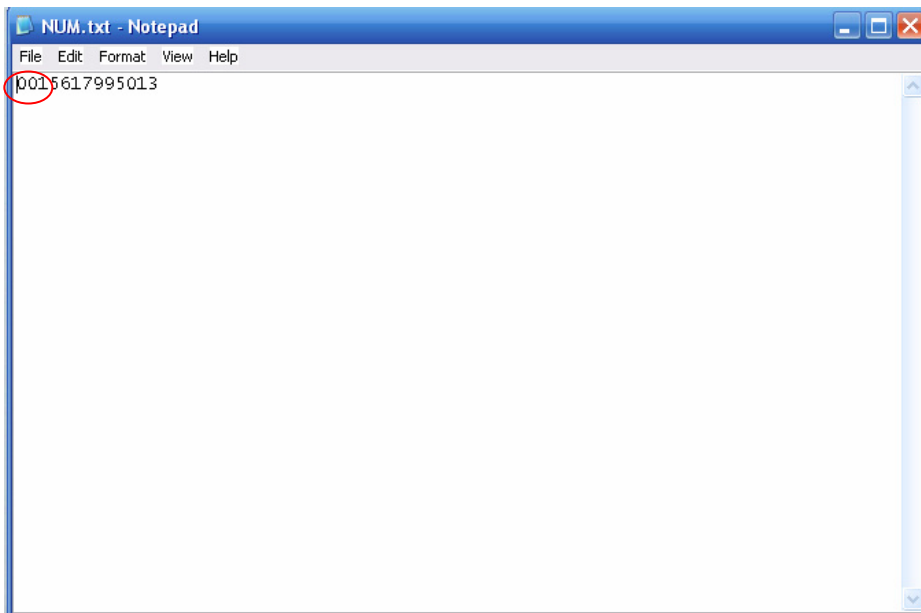

All product names, brands, or companies mentioned are trademarks or registered trademarks of their respective owners.  
*SnapSat™-lp* is a product of Systems Research and Development Corporation that is not affiliated with Iridium Satellite LLC or any of its subsidiaries or partners.

Check that the SD card is NOT in the Lock position

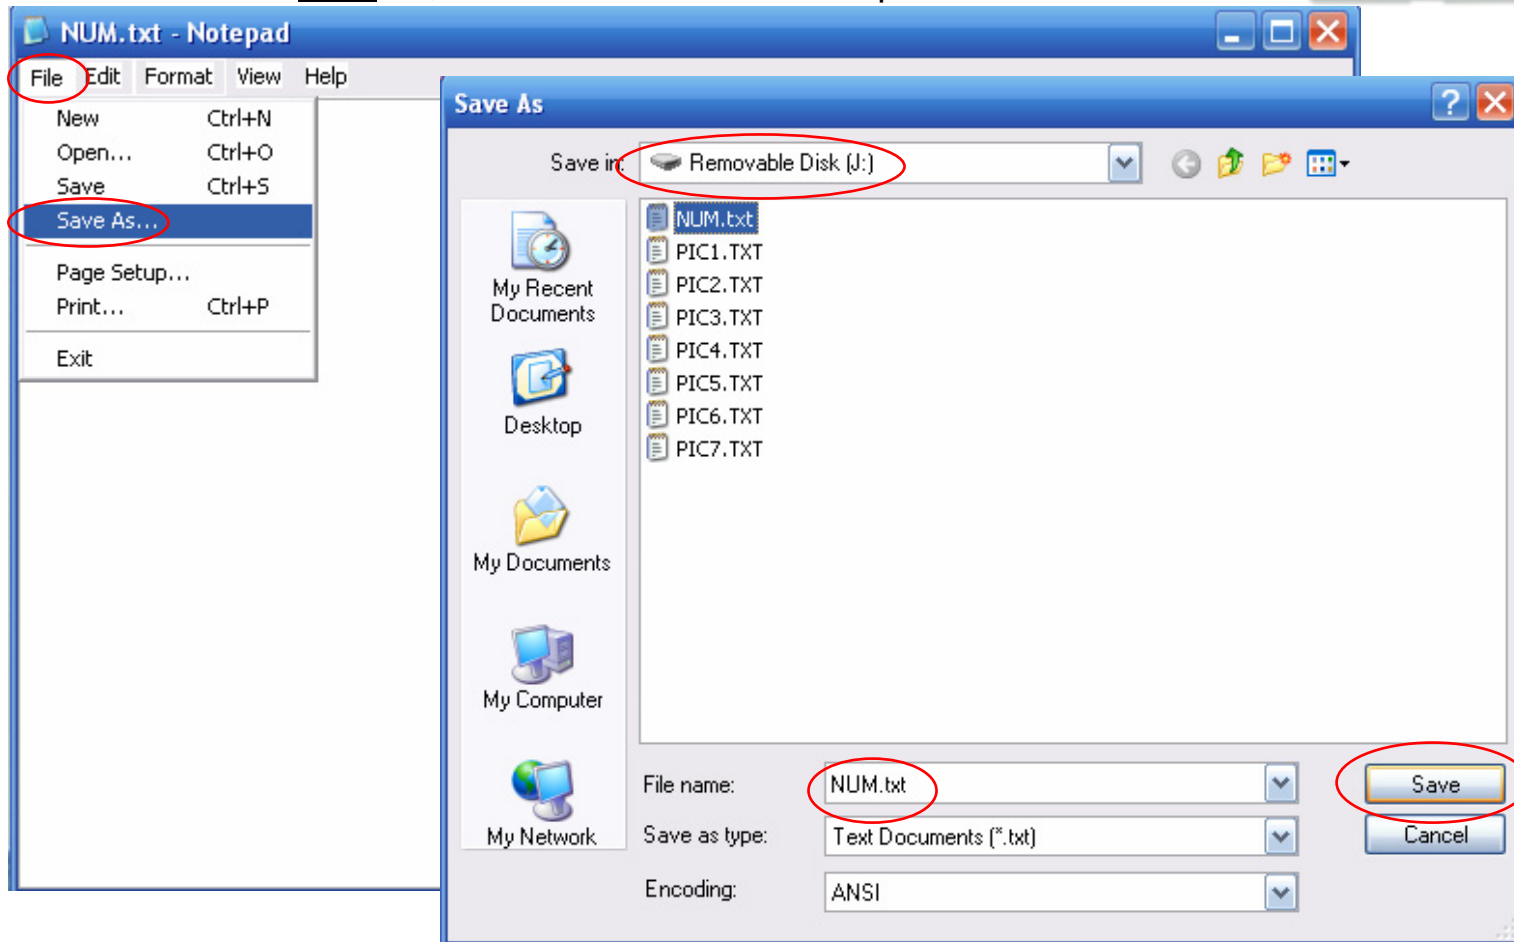

Insert the SD card into the reader

After inserting the SD card you should be able to open the card from

1. Start → My Computer → (your drive letter):\  
In this example the drive letter is J
2. Open the file NUM.txt using your favorite editor  
In this example we used Notepad  
Start → All programs → Accessories → Notepad
3. The number that is pre-programmed is displayed
4. Delete the text and enter the new number  
Note the leading 3 digits 001 followed by the number  
This is specific to Iridium® and the  
sim card (government - 00697 or commercial - 001)

5. Save the file to the SD card  
File → Save As...
6. Double check that the SD drive is selected  
In this example it is drive J:
7. Make sure to save the file as NUM.txt
8. Remove the SD card
9. Make sure Lock is NOT on, re-insert card into the SnapSat™ unit
